

WOOD

All bluepill volumes are made with 18mm, 13 layers, high-quality birch plywood. We use birch because it provides the perfect balance between strength and elasticity. In addition, birch is a fast-growing tree making it an environmentally-friendly choice. Since the volumes are made entirely of plywood, installing screw-on holds is a cinch.

TEXTURE

The bluepill texture is one of a kind. It's not paint, and it's not a truck bed liner. It's our special bluepill texture. It is similar to the texture of climbing holds, except that it is somewhat water absorbent, which helps keep it from becoming greasy or sweaty as it does with paint. The texture is made of three rock-hard layers that are ultra-durable and can even withstand the abuse of a power washer without any effect on the texture or color. The texture is available in any one of our 40 standard colors or any custom color you want.

T-NUTS

All our volumes have bomber T-nuts installed with two set screws. Our volumes have about twice as many T-nuts as most competitors to allow for more flexibility and creativity in route setting.

informations

SCREW-ON

All volumes can be screwed on around the edge of the Volume. The screw placements are pre-drilled and reinforced with special metal screw washers. You can use either countersunk screws or pan-head screws to attach the Volume. The screw-on option gives you the possibility to put the volume exactly where you need it if a T-nut isn't available. These screw-on spots also allow you to easily install set screws, to prevent larger volumes from spinning.

BOLT-ON

Most of the volumes can also be bolted, on from the outside of the volume, a baseplate is not required. This option allows setters to easily add and remove volumes to and from any wall with T-nuts. Bolt-on volumes also allow us to provide larger volumes without the charge for a baseplate. The bolt-on spot is reinforced with a washer and a layer of extra resin under the wood.

*These bolt-on spots are not shown in most of our current pictures.

EASY TO CLEAN

Clean your bluepill volumes easily with a power washer or by scrubbing away any chalk or shoe rubber without damaging the texture.

MAINTENANCE

When holds are screwed to a climbing wall and regularly used, it is normal that they become dirty from chalk and shoe abrasion. In the long term, the grip can be impaired. We therefore advise you to regularly clean the holds and check their condition.

BLUEPILL MATERIAL

Bluepill holds are made from a first-class polyurethane or polyester. These two materials have different properties and are carefully selected according to the shape of the holds. During production, we carefully inspect every single hold at every stage of production. This is why we are able to offer a product of the highest quality, which has a long service life.

ATTACHMENT SYSTEM

All bolt-on bluepill holds are equipped with a double mounting system so it is possible to attach the holds with an M10 bolt with a cap head or martini head. Apart from a few exceptions, bluepill holds can also be fastened with wood screws to allow for more flexibility for the hold position. We advise our customers to always use all set screw spots to make sure the attachment is optimal. Please read the instruction sheet to know exactly how to attach the holds.

HOLLOWBACK

We use our hollowback system for all the bigger bluepill holds. This system saves material and also reduces the weight of the holds without compromising safety or hold durability. Hollowbacks also make it much easier to handle the larger holds while setting and stripping routes or boulders.

CUSTOM ORDERS

- We can customize your order in a variety of ways:
- Safety backup / mounting aid for bigger volumes
 - We can produce your volumes in any custom color or combination of colors.
 - Volumes without T-nuts are also an option.
 - Custom built volumes based on a sketch.
