

The background of the entire page is a close-up photograph of several white, curved climbing holds. The holds are arranged in a way that creates a sense of depth and perspective, with some in the foreground and others receding into the background. The lighting is soft, highlighting the smooth texture of the plastic. The dark blue background provides a strong contrast to the white holds.

CLIMBING HOLDS • VOLUMES • EQUIPMENT

Passion & Creativity:

At bluepill, we're passionate about creating quality climbing holds and volumes that inspire your creativity and push your limits.

Whether you're an experienced gym or just starting out, our products are designed to help you reach new heights and achieve your and your customers' goals. Our holds and volumes are perfect for use in any climbing or bouldering gym and have been used at competitions around the world. We invite you to explore the world of bluepill climbing holds and discover the passion that defines our brand.

*Let's create the future together
Joseph + Team*

Quality & Colors:

We place an unwavering emphasis on the excellence of our holds and volumes, exclusively employing superior materials and manufacturing processes to guarantee that each item aligns with our rigorous criteria. From the texture and configuration to the robustness and safety attributes, every facet of our products is meticulously examined to offer the utmost gratification for your clientele.

You are also granted the liberty to select the color of your products. Regrettably, owing to the distinct material compositions, achieving a 100% match is not always feasible, thus minor color variations may occur. The color references are provided in RAL code as a reference, assisting you in selecting the suitable hue. In case of any uncertainties, we are here to offer guidance, recognizing that printed materials and screens frequently exhibit diverse color interpretations.

Variety:

Diversity lies at the core of the bluepill experience, and we present an extensive array of holds and climbing volumes tailored to cater to every climbing style and proficiency level. Ranging from slopers and crimps to jugs and pockets, our product range is meticulously crafted to both challenge and motivate climbers of all aptitudes. It also empowers route setters to set dynamic and captivating routes und boulders, unleashing a realm of limitless possibilities. Our commitment to introducing new designs and releases on a regular basis ensures there's always something novel and exhilarating to explore.

Sustainability:

Sustainability is a paramount commitment for us, and we are unwavering in our efforts to mitigate our environmental footprint at every step of our operation. This includes the use of recycled materials and the implementation of waste reduction strategies in our manufacturing processes. We actively support local climbing communities and initiatives as part of our endeavor to pave the way for a more sustainable future for climbers worldwide. A notable stride in this direction is our macro material: The macro's body is crafted from 100% recycled industrial waste and is entirely reusable.

Custom Orders

You have a range of customization options for your order with us:

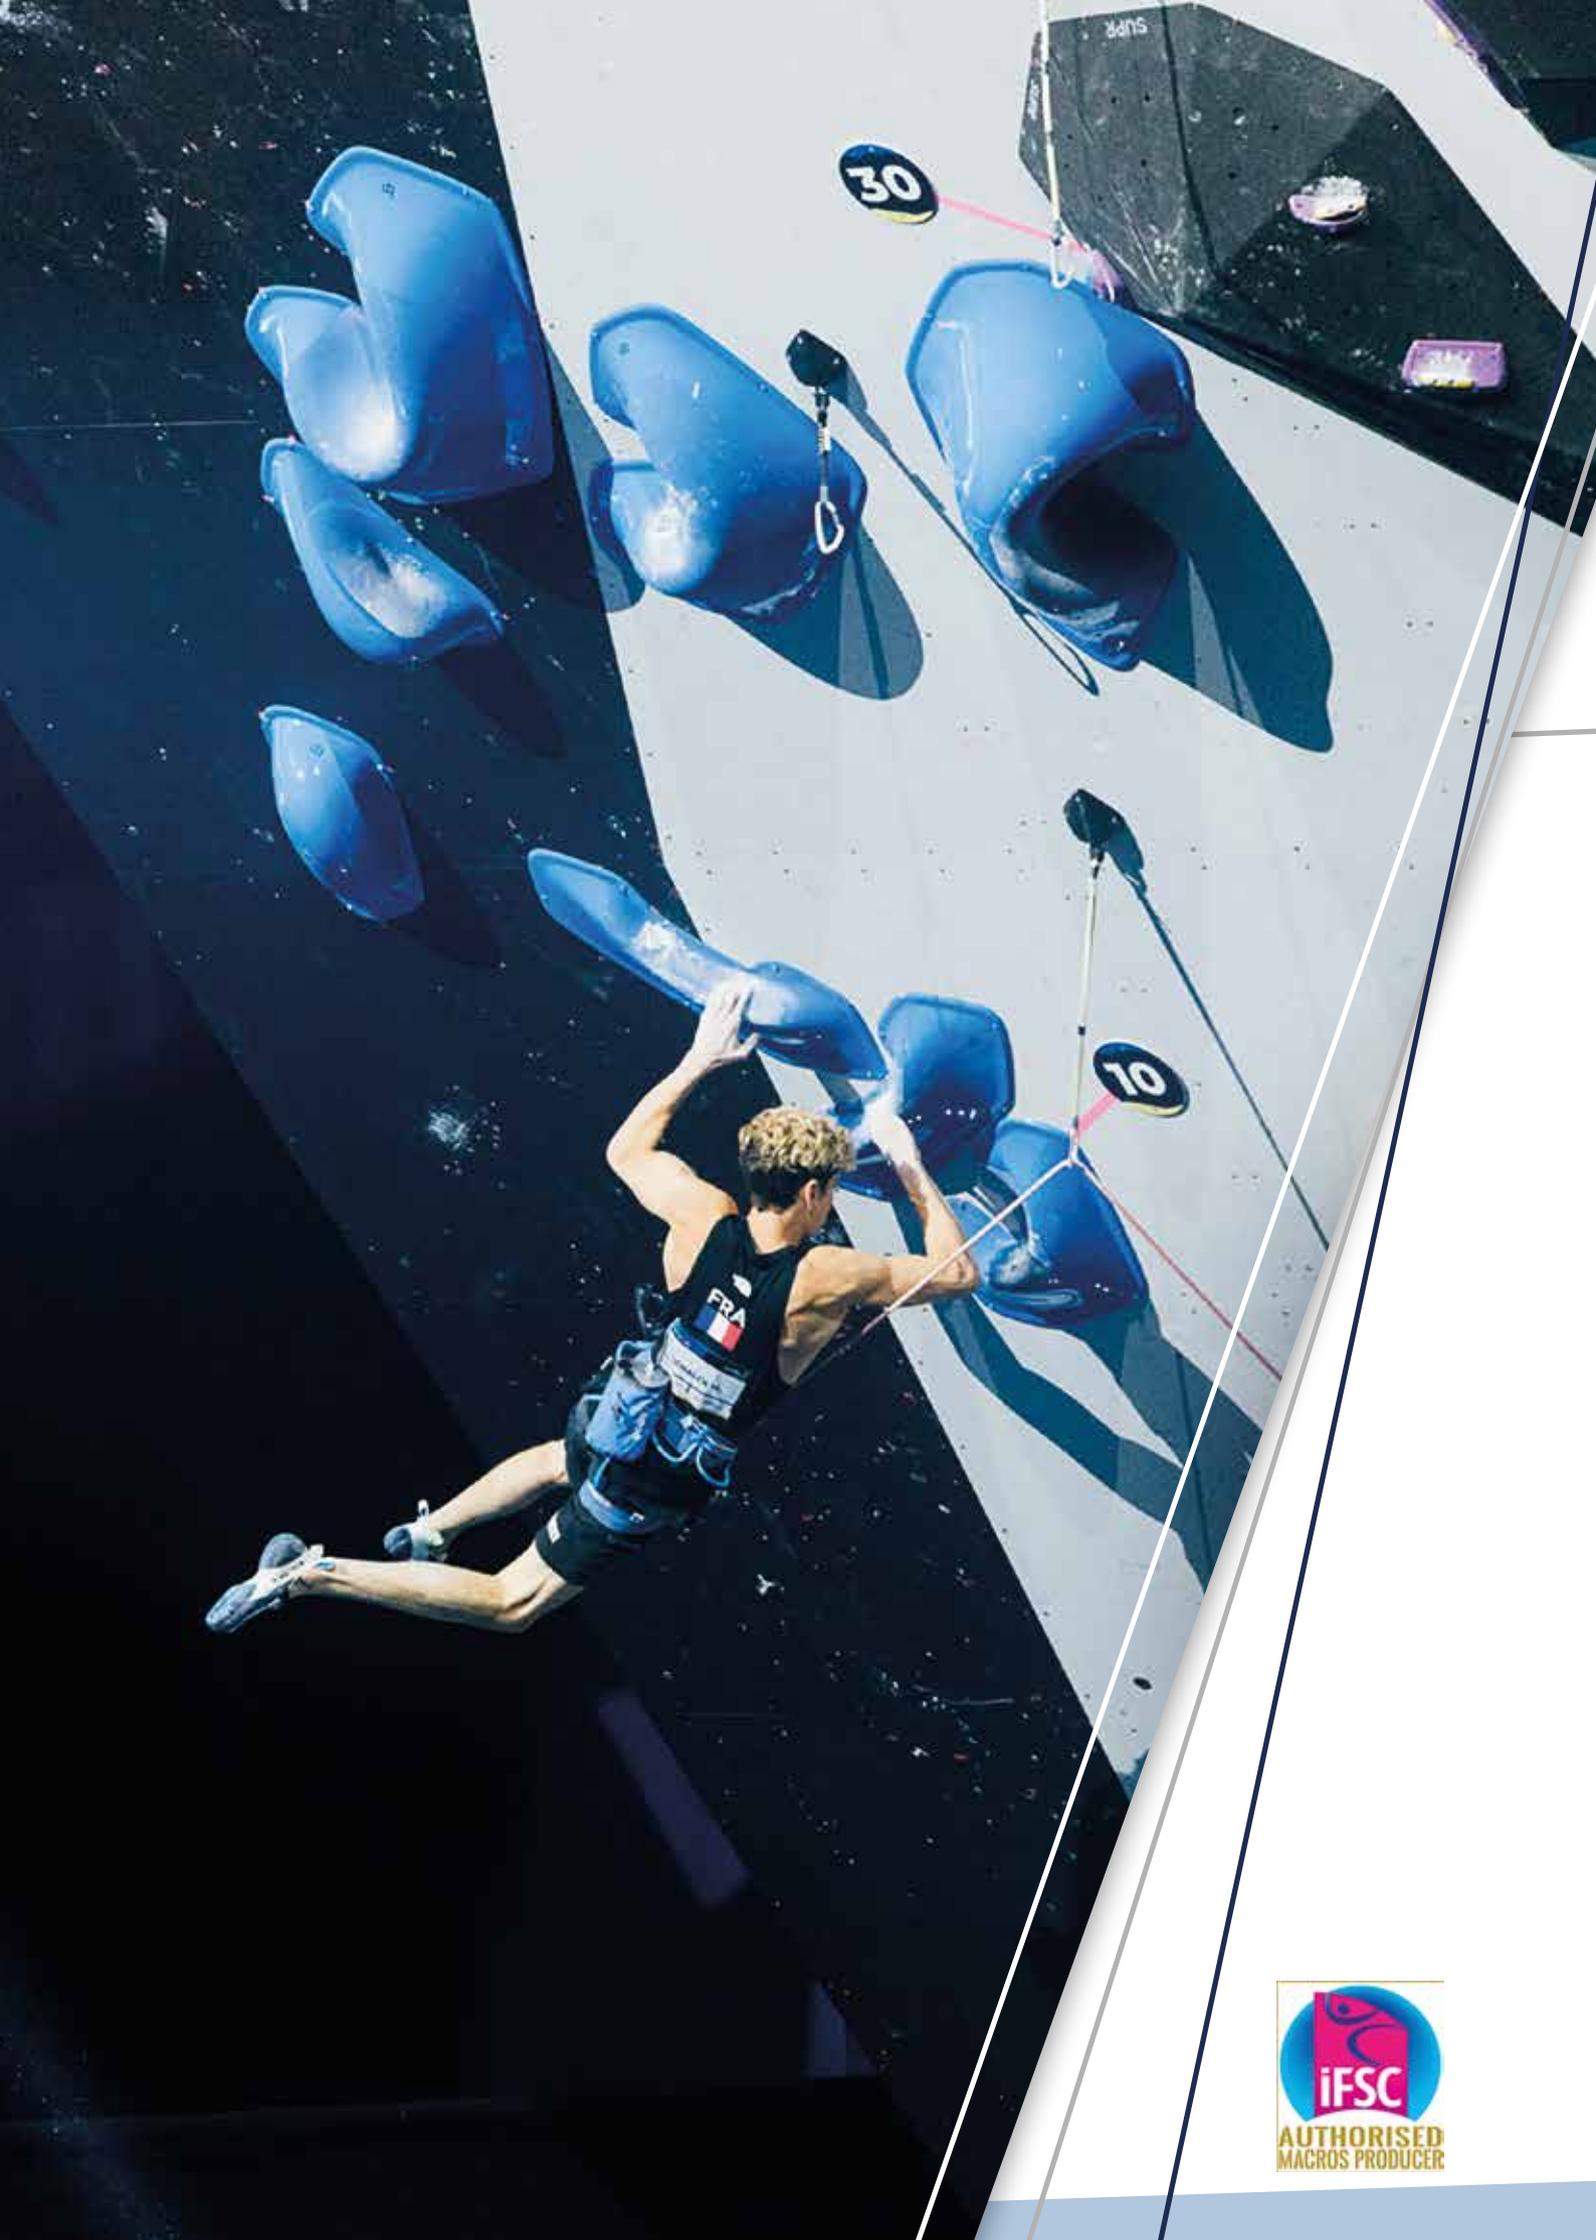

- Safety backup or mounting aids for larger volumes
- Custom volumes in your choice of color or color combinations
- Volumes without T-nuts if necessary
- Tailor-made volumes created based on your sketches or designs

If you have other ideas or specific requests, please get in touch with us. We're committed to bringing your unique visions to life.

dopes

about...

Unleash the excitement: Introducing the groundbreaking macros by bluepill! These line of 29 distinctive macros in dual texture transform into challenging holds when placed on steep overhangs. With their wide range of sizes options, they bring diversity to route setting in four sets: rings, edges, sloper and jugs. The new dopes are absolutely photogenic macros and their versatility makes them a must-have on any wall! The new Dopes are also perfect for competitions - best in combination with the fiberimpressions, impossibles or the compline from bluepill.

MACROS PRODUCER

impossibles

about...

The set, consisting of 8 macros from small to large, impresses above all with its sustainability: The base body – manufactured by blocz – is made of 100% recycled plastic. In combination with the hold set impossibles, consisting of 224 holds, a set is created that is particularly multifunctional. In addition, especially the macros can be combined well with the series fiber impressions and competition line. Here, too, you can choose between mono and dual texture, depending on your preference.

pills

about...

Their rather unusual round shape for climbing holds makes them look special: the pills. With an angled cut, the series with 120 holds and 2 macros is interesting to install; the dual texture emphasizes this.

Here, particularly creative work can be done in route setting and, depending on the terrain, easy to difficult boulder and routes are possible. In addition to small holds (2.5 cm) to large macros (50 cm), this newly developed, impressive set offers not only good holds but also nasty slopers that provide even more excitement!

wings

about...

The volume holds series wings includes wooden volumes and PU holds from 8 cm to 1.50 m size and are thus even larger and more impressive than the diamond series. The volume holds can be ordered with either mono or dual texture, while the complementary PU holds are generally only available in dual texture. The surfaces of the volumes and holds, arranged at various angles, allow for medium to very heavy difficulty levels and imposing movements, depending on the terrain.

diamonds

about...

The wooden bluepill volume holds with dual texture offers many different ways to connect with each other. In addition to the large middle connector, all volume holds can also be used separately. Great to adjust the difficulty with some screw on PU holds. It is also possible to choose between mono, dual and no texture!

fiber impressions

about...

The fiber impressions can be combined with other bluepill sets, for example the competition line. Thus, the combination is extremely popular in both competition and commercial use. Their extension with 22 macros is slightly different in size, but they are more undercut and juggy – especially well suited for easier difficulty levels. In combination with the existing set, but also with the impossible set (holds and macros), even more varied boulder and routes are possible! It can be chosen between mono and dual texture.

competition line

about...

The competition line offers a very diverse assortment of small to large, good to bad grips, which allows a variable, versatile use. Thus, the combination of sets is extremely popular in both competition and commercial use.

split grip

about...

The more extensive PE line Split Grip from bluepill has a simple and elegant dual texture. Route setters can choose from large grips to small spaxes and thus vary the difficulty accordingly. The set is particularly suitable for routes and boulders of easy to medium difficulty. Above all, the spax holds can be installed very well directly on edges, which increases the popularity of their use for routes enormously.

straight bloc

about...

The line straight bloc is one of the few hold sets from bluepill made of PE. With a good price-performance ratio, the set includes small spax holds, large jugs, small finger holes, bars, crimps and much more – a good all-rounder for example for the initial equipment of a new gym.

kletterku

down climb

about...

Why do we need climbing holds to climb down? Quite simply: to land safely on the mat after bouldering! The down climb jugs are designed to be particularly easy to grip by anyone and are visually distinct from other climbing holds. This eliminates the possibility of confusion! Their ergonomics and haptics are suitable for all wall angles, so that the holds can be used even with more severe problems, for example, to clean holds or project boulder.

wall volumes

dual texture option

about...

The range includes volumes that allow holds to be attached with M10 screws. They focus on adding variety to route setting by making all shapes asymmetrical, allowing route setters to choose between as many different angles and sizes as possible.

new

New in: Select your style

Opt for the mottled blue with a whimsical chalk-like front print or go for the white shirt featuring a subtle triple front print in three different shades of blue. In addition to the essentials, we're introducing shirts from the exciting new impossible and dope series. These tees feature your beloved bluepill holds transformed into wearable art. And, as always, our shirts are made from organic cotton, ensuring comfort even on the warmest and busiest days.

The **grey sweater** is cozy and should not only be worn when route setting. The simple design with large logo embroidery on the front and designed embroidery on the back is high quality and suitable for everyday wear.

Our **bluepill caps** are available in the standard textile version and in our premium version with real wood shield and logo patch. These can also be individualized with your personal wishes as a laser engraving.

The **socks** in blue with white integrated logo are simply simple and cozy—just make a statement!

The **longsleeve** with front print is suitable for medium-warm days in the climbing gym and the transitional season. The bluepill logo, also blue, is discreetly tone on tone and captivates with its typical bluepill color scheme.

cleaning

Bluewash stands out as a versatile and specialized cleaning solution tailored for climbing holds and gym equipment. The product line comprises three distinct variations, each catering to different cleaning requirements. The **bluewash concentrate** can be conveniently mixed with water to create a customizable cleaning solution suitable for various levels of soiling. **bluewash extreme** is engineered for the rigorous cleaning of heavily soiled holds and equipment, while **bluewash soft** is formulated for lighter cleaning needs.

Bluewash, initially developed as the first cleaning product for holds, primarily serves the purpose of cleaning magnesium/chalk residue. However, as the issue of climbing shoe abrasion gained significance, **bluewash extreme** was introduced. The primary distinction between these two products lies in their composition. Bluewash is acid-based, while **bluewash extreme** is alkaline-based. In order to facilitate export and eliminate the need to ship hazardous materials, **bluewash soft** was created. This cleaner features a mild alkaline composition and incorporates surfactants. Although it is slightly less potent than **bluewash extreme**, it still offers improved performance in addressing shoe abrasion compared to the original bluewash.

Furthermore, bluepill extends its cleaning solutions to encompass shoes (**shoewash**) and mats (**matwash**). This comprehensive approach demonstrates bluepill's commitment to addressing the specific demands of the climbing and bouldering gym industry by offering specialized products tailored to those needs.

information

Wood

Every bluepill volume is meticulously crafted from 18mm thick, 13-layer, high-quality birch plywood. Our choice of birch is driven by its exceptional balance between strength and elasticity. Furthermore, birch is a rapidly regenerating tree, rendering it an environmentally conscientious selection. Given that our volumes are constructed entirely from plywood, the process of installing screw-on holds is exceptionally straightforward.

Texture

The bluepill texture is truly unique. It's neither paint nor a truck bed liner – it's our exclusive bluepill texture. This texture closely resembles that of climbing holds, but with the added benefit of being somewhat water absorbent. This characteristic helps prevent the texture from becoming slippery due to moisture, a common issue with painted surfaces. The texture consists of three robust layers that are exceptionally durable, capable of withstanding the force of a power washer without any impact on its texture or color. You can select this texture in any of our 40 standard colors or even request a custom color of your choice.

T-Nuts

Our volumes are equipped with exceptionally sturdy T-nuts secured by two set screws. We take pride in the fact that our volumes incorporate nearly twice the number of T-nuts compared to many of our competitors. This surplus of T-nuts enables greater flexibility and creativity in route setting, ensuring you have more options when setting challenging and engaging routes.

Screw-On

Our volumes are designed to accommodate screw placements around their edges. These positions are pre-drilled and reinforced with special metal screw washers. You can choose to use either countersunk screws or pan-head screws to attach the volume. The screw-on option provides the flexibility to position the volume precisely where needed, even if a T-nut isn't available. These screw-on spots also enable easy installation of set screws to prevent larger volumes from spinning during use.

Hollowback

For our larger Bluepill holds, we employ the hollowback system. This innovative approach not only conserves material but also reduces the weight of the holds without sacrificing safety or durability. Hollowbacks greatly enhance the ease of handling larger holds when setting or removing routes and boulders.

Bluepill Material

Our holds are meticulously crafted from top-tier polyurethane or polyester materials. The selection of these materials is based on the unique characteristics necessary for each hold's specific shape. Our production process includes rigorous inspections at every stage, guaranteeing the utmost quality and ensuring the longevity of our products.

Easy To Clean

Cleaning your bluepill volumes is a breeze – you can use a power washer or simply scrub away chalk and shoe rubber without worrying about damaging the texture.

Maintenance

When holds are screwed onto a climbing wall and get regular use, they may accumulate chalk and show signs of shoe abrasion over time. This can eventually affect their grip. Hence, we recommend regular holds cleaning and periodic condition checks.
